

CDN EMCL-35

EM-Coupling clamp

IEC / EN 61000-4-6

- For the coupling during immunity tests according to IEC/EN 61000-4-6
- Frequency range 10 kHz – 1 GHz
- Suitable for cables up to 35 mm, for thinner cables up to 20 mm: use CDN EMCL-20

For cable diameter up to 35 mm, calibration unit and calibration data are supplied with each unit!

Overview

EM coupling clamps are always used when the use of coupling / decoupling networks (CDN) does not seem suitable or appropriate. This applies, for example, to unshielded cables consisting of a large number of individual conductors.

With the electromagnetic coupling path, both capacitive and inductive coupling into the cable connected to the test object is achieved.

The EM coupling clamp has a directivity of ≥ 10 dB above 10 MHz, so that a defined impedance between the asymmetrical connection point of the auxiliary / additional equipment and the reference ground plane is no longer required. Above 10 MHz, the behavior of the EM coupling link is therefore similar to that of coupling/decoupling networks.

Key facts

- EM-coupling clamps for immunity tests on cables up to 35 mm diameter
- Low insertion loss: less than 15 W amplifier power is required to achieve the highest test level of 10 V
- Supplied as standard with calibration set and individual calibration data

CDN EMCL-35

EM-Coupling clamp

Technical data I

CDN EMCL-35

Frequency range 10 kHz – 1 GHz

Nominal impedance 50 Ohm

Max. input level

0,15 – 100 MHz 100 W, 15 min

100 – 230 MHz 100 W, 5 min

230 – 1000 MHz 50 W, 3 min

Connector N-type female

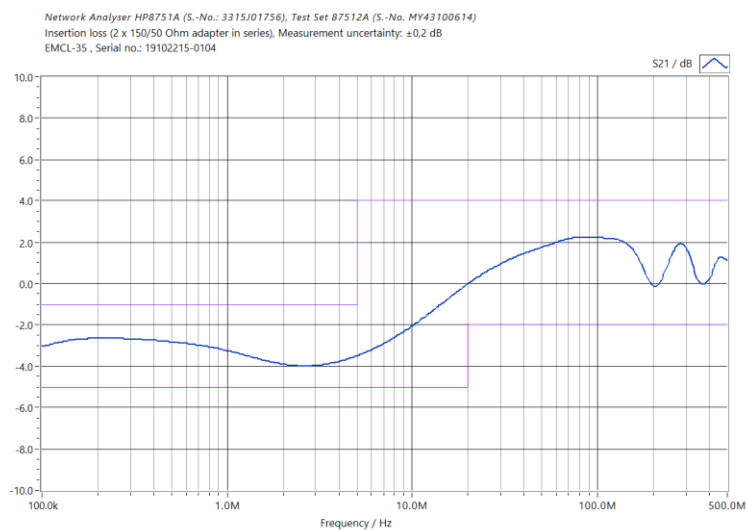

Cable diameter max. < 35 mm

Dimensions (L x W x H) 666 x 135 x 120 mm

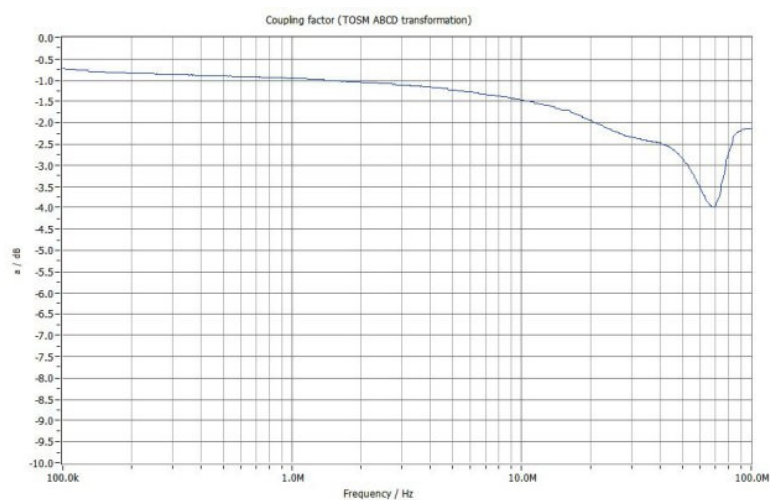

Weight approx. 14 kg

Technical data II

Typical coupling factor

Typical decoupling factor (transformed)

CDN EMCL-35

EM-Coupling clamp

Measured amplifier power

Measured amplifier power to achieve the highest level required in EN 61000-4-6 of 10 V.
Measurement was carried out with 6 dB attenuator and 80% amplitude modulation.

Typical clamp impedance (transformed)

CDN EMCL-35

EM-Coupling clamp

Comparison of coupling factors EMCL 35 / 20

The high coupling factor of the EMCL-35 allows a test according to level 3 (10V) of IEC 61000-4-6 already at 10 kHz with the test generator CDG 7000-75-10.

Calibration set / calibration data (included in delivery)

- 2 mounting brackets incl. 50/150 Ohm transition
- 1 piece BNC termination, 50 Ohm, 1 W
- 1 adapter with banana plugs for calibration of the network analyzer, length 34 mm
- 1 piece brass rod 4 mm with banana plugs for setting the test level, length 672 mm
- N male to BNC female

Options

CDG 7006-20W	Attenuator 6 dB, 20 W, BNC connector male / female
CDG 7006-100W	Attenuator 6 dB, 100 W, BNC connector male / female
CDN ABCL-20	Absorber clamp for additional decoupling during immunity testing according to IEC / EN 61000-4-6, 100 kHz - 1000 MHz, cable diameter max. 20 mm.
